

flu: 5 reasons to vaccinate your child

1. Protect your child. The vaccine will help protect your child against flu and serious complications such as bronchitis and pneumonia

2. Protect you, your family and friends. Vaccinating your child will help protect more vulnerable family and friends

3. No injection needed. The nasal spray is painless and easy to have

4. It's better than having flu. The nasal spray helps protect against flu, has been given to millions of children worldwide and has an excellent safety record

5. Avoid costs. If your child gets flu, you may have to take time off work or arrange alternative childcare

What should I do?

Contact your GP if your child was aged two or three years old (on the 31 August of the current flu season) and you haven't heard from their GP by early November. If your child is at

primary school, the school will send you a consent form. Please sign and return it. If your child has a health condition that puts them at greater risk from flu, they can get the flu vaccine from their GP.
